Pt Name: JENKINS, HENRY Referring physician: Dr.Higuera  
DOS: Feb 24, 2022 15:17:11  
DOB: Jan 27, 1968  
MRN: AR-220196

STUDY DESCRIPTION: MRI RT-KNEE

CLINICAL HISTORY: Pain.

TECHNIQUE: Multiplanar and multisequence images were obtained.

FINDINGS:

BONE MARROW AND OSSEOUS STRUCTURES: There is a lateral tilt to the patella. The bone marrow signal intensity is normal. There is no evidence of fracture or contusion. There is no evidence of patellar chondromalacia.

LIGAMENTS AND TENDONS: The anterior cruciate, posterior cruciate, medial collateral and lateral collateral ligaments are normal. The quadriceps tendon and patellar tendons are unremarkable. The patellar retinacula are normal.

MENISCI AND JOINT SURFACES: There is a tear involving the posterior horn of the medial meniscus, which communicates with the inferior meniscal surface. Hypertrophic change is seen in the medial and lateral compartments. There is a suprapatellar effusion. A joint effusion is present indicating the presence of synovitis/bursitis.

MUSCULATURE AND SOFT TISSUES: There is no evidence of soft tissue mass or abnormal signal intensity. No popliteal cysts are present.

IMPRESSION:

1. Suprapatellar effusion.
2. Joint effusion.
3. Lateral patellar tilt.
4. There is a tear involving the posterior horn of the medial meniscus, which communicates with the inferior meniscal surface.
5. Hypertrophic change medial and lateral compartments.
